Why is this transmission development needed?

EPCOR Distribution and Transmission Inc. (EPCOR) has applied to the Alberta Electric System Operator (AESO) for transmission system access to reliably meet the growing demand for power within the City of Edmonton. EPCOR’s request can be met by modifying the existing Rossdale substation, including adding a new 15 kV breaker and associated equipment.

The Alberta Electric System Operator (AESO) is processing EPCOR’s request, including providing information to landowners, occupants, residents and agencies that may be near the proposed transmission developments. The AESO intends to apply to the Alberta Utilities Commission (AUC) for approval of this need in the spring of 2015. The AESO’s needs identification document (NID) application will be available on the AESO’s website at www.aeso.ca/nid at the time of its application to the AUC.

Who is the AESO?

Alberta’s transmission system, sometimes referred to as the Alberta Interconnected Electric System (AIES), is planned and operated by the AESO. The transmission system comprises the high-voltage lines, towers and equipment (generally 69 kV and above) that transmit electricity from generators to lower voltage systems that distribute electricity to cities, towns, rural areas and large industrial customers.

The AESO’s role is to maintain safe, reliable and economic operation of the AIES. The AESO’s planning responsibility includes determining the need for transmission system development and the manner in which that need is met. The AESO is also mandated to facilitate the interconnection of qualified market participants to the AIES. The AESO is regulated by the AUC and must apply to the AUC for approval of its NID application.

How is EPCOR Distribution and Transmission Inc. (EPCOR) involved?

EPCOR is the transmission facilities owner (TFO) in the City of Edmonton. While the AESO is responsible for identifying that transmission system development is needed, EPCOR is responsible for detailed siting and routing, constructing, operating and maintaining the associated transmission facilities. The AESO has directed EPCOR to provide information to stakeholders on this need and to file a facility proposal application with the AUC, which will include a detailed description and location of the proposed transmission developments.

Further Information

The AESO appreciates your views on the need for transmission system development and your comments are encouraged. If you have any questions or comments regarding the need for the proposed developments in the City of Edmonton or the AESO’s application regarding this need, please contact:
