

February 26, 2009

Dear Stakeholders:

Attached for your information and review is an update to the Market Roadmap. The document provides an overview and update for market related projects to implement the Department of Energy Market Policy. We are pleased to note that all policy implementation work is now in progress at some stage. Further, this version also unveils a consultation life cycle to provide some guidance and clarity to the scope of work that associated market design and rule changes will follow. The targets for each project are illustrated against this consultation cycle.

The AESO would like your feedback on the material in the document. Please comment on any questions or issues related to the project scope and timeline. Also, provide input related to any priority work that should be incorporated into the Roadmap. Finally, as it is the AESO's intent to conduct work on systems and operational implementation processes, any input on this component is helpful as well.

A workshop to discuss the Roadmap and other Market Services initiatives will be scheduled for March. Please provide formal comments prior to March 26, 2009 to April Walters at [april.walters@aeso.ca](mailto:april.walters@aeso.ca)

Sincerely,

Cheryl L. Terry  
Vice-President  
Market Services (Interim)
