Subject: Comments on Various Proposed Standards

Attached, on behalf of Imperial Oil Resources Limited are some questions/comments on the following proposed Alberta Reliability Standards;

PRC-007-AB-0 Assuring Consistency with Regional Underfrequency Load Shedding Program Requirements

This standard appears to be applicable to the Imperial Oil Resources Cold Lake ISD as a TFO and Market Participant. can the AESO please clarify what is meant by underfrequency data as there is no definition in the Glossary document?

PRC-015-AB-0 Remedial Action Scheme data and Documentation

This standard appears to be applicable to the Imperial Oil Resources Cold Lake ISD as a GFO.....can you confirm that the existing OPP 508 is sufficient documentation.....if not can you clarify what documentation will meet the requirement.

PRC-017-AB-0 Remedial Action Scheme

This standard appears to be applicable to the Imperial Oil Resources Cold Lake ISD as a GFO. There is a requirement for testing/maintenance of the TPS; can the AESO clarify what tests or maintenance of the TPS would be required by an ISD GFO when the TFO is the owner of the TPS equipment and how such testing by the TFO might impact the GFO?

EOP-008-AB-0 Plans for Loss of Control Centre Functionality

This standard appears to be applicable to the Imperial Oil Resources Cold Lake ISD as a TFO...can you confirm this to be the case when ATCO is the only party with the ability to de-energize the IORL owned transmission line?

MOD-010 & MOD-012-AB-0 Steady-State and Dynamic Data for Transmission system Modeling and Simulation

Can the AESO please clarify when (under what circumstances) the GFO/TFO is required to provide the data?

Regards,

Richard W. Gallant
