Dear Stakeholders:

Re: Calgary Area Load Information Availability

The AESO is posting the Calgary area load calculation. The Calgary area load is calculated on a real-time basis using real-time telemetered data points from area transmission lines and generators. Please refer to OPP 510 section 3.1 for a description of the calculation. The Calgary area load will appear on the AESO Current Supply Demand report on Thursday October 13, 2005.

The file contains historical hourly average values for the Calgary area load. The data was obtained from the AESO's real time historical database. Click [here](#) to view the data.

Due to the nature of the using real time telemetered points, there are several hours marked "no data". The information in the file is subject to the AESO's website "Legal" notice. That "Legal" notice includes the following:

The AESO cannot guarantee the accuracy, currency or completeness of the information. The AESO may revise, supplement or delete information, services and/or the resources contained in the website and reserves the right to make such changes without prior notification to past, current or prospective visitors. Exclusion of liability: The AESO shall not be liable for any claims, expenses, damages (including direct, indirect, special or consequential damages), loss of profits, opportunities or information arising from:

the use of or reliance on information contained in this website; any inaccuracy or omission in such information or failure to keep the information current; use of any third party websites linked to this website; any Internet software used in connection with this website or computer viruses or other destructive programs encountered as a result of using this website; any other matter connected with this website; even if the AESO is made aware of the possibility of such claims, expenses, damages or losses.

Yours truly,

Jerry Mossing  
Director, Operations Planning
