

AESO Reliability Standards Monthly Report

September 2010

FAC-013-2 - Planning Transfer Capability

Purpose:

Draft 2 Standard, posted for comment and ballot.

Current Standard:

FAC-013-1 was NERC BOT approved on February 7, 2006 and became effective October 7, 2006.

Proposed Standard:

In Order 729, FERC ruled that the ATC standards developed in Project 2006-07 did not completely address the topics covered in FAC-012 and -013 and did not fully address the associated directives from Order 693. Accordingly, FERC denied the portions of the implementation plan that would have retired these standards, and instead directed NERC to use the standards development process to make changes to the FAC standards and file those changes with FERC no later than 60 days prior to the effective date of the standards, which is April 1, 2011 (requiring the proposed changes to be filed on or before January 31, 2011).

A second draft of the proposed standard has been developed that attempts to address the applicable FERC directives (listed in the SAR) as well as to address concerns raised by the industry during the first posting.

Applicability:

Planning Coordinator

Current Status:

The standard is posted for comment until November 3. There will be a ballot during the last 10 days of the posting.
