Dear Stakeholder

Re: **AESO updates AIES and DTS Energy amounts for
Future Demand and Energy Outlook (2009 – 2029)**

With the release of the draft *2011 Long-term Transmission Plan* on June 2, 2011, the AESO published *Appendix E – Generation Outlook 2009 – 2029* containing baseline generation assumptions including forecast cogeneration capacity amounts in the future.

In order to reflect the generation outlook's cogeneration forecast in the AESO's forecast of AIES and Demand Tariff Service (DTS), the AESO has updated the amount of load to be served by on-site generation and the results are included in the attached updated tables for AIES Winter Peak Demand, AIES Summer Peak Demand, AIES Annual Energy and DTS Annual Energy.

The updated tables are also provided in an excel datafile.

If you have any questions regarding the updated AIES and DTS amounts, please contact LaRhonda Papworth, Supervisor Forecasting at ph: 403-539-2555 or e-mail larhonda.papworth@aeso.ca or forecast@aeso.ca.

Yours truly,
