Dear Stakeholders:

Re: Public Generation / Load Queue

At the request of several stakeholders, and in an effort to increase transparency, the AESO has expanded the existing generation queue to include all load projects and contract increase requests.

In addition to this combined queue, we will also post a separate generation queue and load queue to accommodate specific customer needs. The format has not changed and will still include the planning area which allows customers to view the projects that could have an impact on available transmission capacity related to their project.

The AESO would like to thank you for your input and hopes that the added transparency is beneficial to those with projects in the queue.

If you have any questions or comments, please contact Jana Mosley at (403) 539-2713 or via e-mail at jana.mosley@aeso.ca

Yours truly,
