

AESO Reliability Standards Monthly Report

August 2010

IRO-006-5 - Reliability Coordination - Transmission Loading Relief IRO-006-EAST-1 — TLR Procedure for the Eastern Interconnection

Purpose:

Revised Standards posted for recirculation ballot.

Current Standard:

TLR Standard IRO-006-4 was approved by the NERC Board of Trustees on October 23, 2007

Proposed Standards:

IRO-006-5 is applicable in the WECC. The drafting team has developed IRO-006-5 and IRO-006-EAST-1 as iterative and incremental improvements to IRO-006-4. This is one of three phases of Project 2006-08. The first phase, the split of the IRO-006-3 and its associated Attachment 1 into NERC and NAESB standards, was completed and approved by the NERC Board of Trustees on October 23, 2007, and filed with regulatory authorities on December 21, 2007. The second phase, which is intended to address any needed modifications to the standards based on the PJM, MISO, and SPP waivers, is currently undergoing field testing. This third phase is intended to improve the quality of the standards.

Applicability:

Reliability Coordinators, Balancing Authorities

Current Status:

The standards were posted for recirculation ballot until August 30. The AESO cast an affirmative ballot. The NERC ballot body approved the standards.
