Re: Upgrade notification to participants for the Energy Trading System (ETS)

As part of the AESO's planned maintenance and system enhancements, there will be a planned upgrade of the Energy Trading System ("ETS") scheduled for Tuesday, January 13th, at 1:15PM MST. Please note this upgrade will not impact the real-time operation of the ETS, however, participants may experience slight delays.

Participants have requested enhancements to the DDS Payment Detail Report, as well as information providing clarity under the Ancillary Services Tab, in ETS. In addition to other ETS system performance enhancements, part of this ETS upgrade will include the following features:

- The ability to select a date range when retrieving data from the DDS Payment Detail Report; and
- Text providing clarity of the reported volumes, under the Ancillary Services Tab.

If you have any comments or questions related to this new feature, please send an email to info@aeso.ca.

Sincerely,
