Dear Stakeholder:

Re: Transmission Changes Associated with the Keephills 3 Interconnection Project
and the Edmonton Region 240 kV Line Upgrades Project

In keeping with the AESO's commitment to provide information to all market participants in an open, fair and timely manner, we have attached single line diagrams (SLDs) for the integrated construction plan for the transmission system portion of the Keephills 3 Generator Interconnection Project and the Edmonton Region 240kV Line Upgrades Project ("Debottlenecking Project"). The AESO has deemed this added level of information as necessary given the material nature of these projects.

The AESO's intent is to provide an overview of the consolidated construction plan for these projects to enable market participants to understand the context of the related transmission line and generator outages as they appear in reports on the AESO website.

These diagrams will be updated and published if significant project changes occur. Should you have any questions regarding this information please contact Ron Strem at 403-539-2472.

Sincerely,

A handwritten signature in black ink, appearing to read "F. Ritter".

Fred Ritter
