Re: **Alberta System Disturbance Report – Events of July 24, 2006**

To ensure the ongoing reliability of the Alberta Interconnected Electric System, the Alberta Electric System Operator (AESO) conducts a thorough examination and analysis of the causes and effects following a major system disturbance.

Accordingly, the AESO conducted a comprehensive review of the events of July 24, 2006 with all parties involved to ensure that all practices, procedures and rules were appropriate and to identify and initiate any necessary improvements.

Attached is the resulting [Alberta System Disturbance Report – Events of July 24, 2006](#). This report provides conclusions and recommendations as a follow up to the [Preliminary Disturbance Summary](#) that was posted on the AESO website after the event.

Sincerely,

Original signed by,

Warren Frost, P. Eng.
Vice-President, Operations and Reliability
