**Re: A Change to the AESO's Load Forecast Process**

Loss Factor Stakeholder Group

Starting March 1 2008, the AESO is creating a midterm Alberta Internal Load (AIL) load forecast. The midterm AIL hourly load forecast (MTLF) will be produced each month for a rolling 24 month period and will provide more accurate inputs into the operational supply-demand balance forecasts . Please contact Rob Baker at (403) 539-2614 if you have any further questions

Sincerely,
