

104 EXTENDING ENERGY MARKET SUBMISSION TIME

1. Purpose

Provide policies and procedures for extending energy market submission time when the Energy Trading System (ETS) is out of service.

2. Background

Pool participants must submit offers or bids for the next trading day to the ISO before 12:00 hours (noon) of the day before the next trading day. However, if the ETS is out of service, this may prevent pool participants from submitting bids and offers on time.

3. Policy

- If pool participants are unable to submit bids or offers before 12:00 hours due to the ETS being out of service, the ISO may extend the energy market submission time.
- The duration of the extension beyond 12:00 hours may not exceed one hour after ETS is back in service.

4. Responsibilities

4.1 ISO

The ISO and Energy Market Participant Support (EMPS) are responsible for:

- Reviewing and updating this OPP as required.
- Assessing whether the shutdown of the ETS could prevent the submission of bids and offers by 12:00 hours. If it does, approval must be obtained from the Director of Grid and Market Operations, or the System Operations On-call representative, to extend the submission time. If it does not, the submission time will not be extended.
- If the submission time extension is approved and once the ETS is operational, update ETS to reflect the extended submission time.

4.2 System Controller

The SC is responsible for:

- Advising the Energy Market Participant Support (EMPS) team if the ETS is inaccessible by pool participants.
- If the request to extend the submission time is approved, posting a message in the AIES Event Log that the ETS is inaccessible and the submission time will be extended once the ETS is operational.

Emergency Energy Market Operations
OPP 104 Extending Energy Market Submission Time

- When the ETS is operational, posting a message on the AIES Event Log advising of the updated submission time in the ETS.
