

Proposed Definitions for BAL-006-AB-1

I. Proposed New Definitions

net actual interchange means the algebraic sum of all metered interchange over all interconnections between two physically adjacent balancing authority areas.
(as defined in the NERC Glossary)

net interchange schedule means the algebraic sum of all interchange schedules with each adjacent balancing authority.
(as defined in the NERC Glossary)

tie line means a circuit connecting two balancing authority areas.
(as defined in the NERC Glossary)

II. Proposed Revisions to Existing Definitions

interconnection means the electrical connection of the AIES with any electric system in a jurisdiction bordering Alberta. When capitalized, it means any one of the three major electric system networks in North America: Eastern, Western, and ERCOT.
