Re: Long Term Adequacy – Market Policy Implementation

In June 2005, the Alberta Department of Energy (DOE) released an electricity market design paper entitled “Alberta’s Electricity Policy Framework: Competitive-Reliable-Sustainable” (“Policy Paper”). Over the past year, the AESO has worked closely with the Long Term Adequacy (LTA) Committee, a group of industry stakeholders, to assist in formulating a recommendation that meets the requirements of the DOE’s Policy Paper. Attached is the AESO’s conceptual [recommendation](#) for consideration by all stakeholders. The AESO extends its appreciation to all participants of the LTA Committee for their contributions and hours of dedication to assist in the development of its LTA recommendation to this point.

The AESO is seeking feedback on the LTA recommendations provided within the paper by **Thursday, March 8, 2007**. The attached [comment matrix](#) is being provided to facilitate the submission of responses. Please submit your comments to Colleen Fairhead at colleen.fairhead@aeso.ca.

Also, a stakeholder session to discuss the paper is being hosted at the Metropolitan Centre in Calgary, 333 – 4th Ave SW, on **Monday, March 5** from 9:00 a.m. to noon. This meeting will also include a discussion on Exports at T-2; please see the AESO website for more information on Exports at T-2. Please RSVP to Kari Lavoie at kari.lavoie@aeso.ca by Thursday, March 1.

If you have any other questions or concerns, please feel free to contact us, at your convenience.

Yours truly,

Colleen Fairhead
