To Jerry Mossing:

Please find attached Suncor's comments on the following standards: VAR 002; VAR 001 and VAR 501. As discussed with members of the ARS User Group, we understand that there have been some changes made to these standards since initial review by the ARS Working Group and Committee. We are therefore requesting that these changes be reviewed once again by the ARS Committees to understand the changes.

Additionally, as reflected in our comments, as more Alberta reliability standards are being released it is becoming more necessary to identify which sub requirements and measures of the standards apply to ISDs. Suncor has raised this point as an ARS Committee member and the requirements being prescribed in new standards need to be tested for ISD applicability.

Thank you Jerry.
