

# AESO Reliability Standards Monthly Report

Summer 2010

## WECC-0066 COM-002-WECC-CRT-1 - Digital Circuits Synchronization

### **Purpose:**

Draft 1 of a new criterion, posted for comment.

### **Current Criterion:**

This is a new WECC criterion.

### **Proposed Criterion:**

This criterion is being proposed to inform applicable WECC entities owning or operating digital TDM telecommunication systems of the synchronization requirements needed to interface digital circuits between entities. The goal is to minimize digital circuit timing problems between entities. This document does not cover Ethernet TCP/IP network timing protocol requirements.

### **Applicability:**

Transmission Operator, Transmission Owner

### **Current Status:**

The criterion was posted for comment until June 29. The AESO did not submit comments. However, Alberta Transmission Facility Owners may want to submit comments on future postings.
