Dear Stakeholders:

Re: Calgary Area Capacitor Banks

As part of the AESO's ongoing initiative to increase Alberta Internconnected Electric System (AIES) North – South transfer capability, the remaining Calgary area capacitor banks will be in place and in service by the end of April.

The capacitor banks are also one component which will assist in export capability – part of the plan the AESO is working on in partnership with industry stakeholders to increase export capability.

Export capability limits will be revised on May 1 to reflect these installed Calgary area capacitor banks.

For more information about all export initiatives and their associated implementation plans you can visit the AESO website at www.aeso.ca and follow the path Grid Operations → System Studies → Export Capability.

Yours truly,

Jerry Mossing
director, Operations Planning
