

Need for the Genesee 330P Substation Upgrade in the Edmonton area

Transmission Development Information for Stakeholders

Capital Power Corporation (Capital Power) has requested transmission system access for its proposed Genesee Generating Station, Units 4 and 5. Capital Power's request can be met by expanding the existing Genesee 330P substation to add four new 500 kV breakers and associated equipment and by constructing two short transmission lines connecting Genesee 330P to Capital Power's new generating units.

The AESO is processing Capital Power's request, including providing information to landowners, occupants, residents and agencies that may be near the proposed transmission development. The AESO intends to apply to the Alberta Utilities Commission (AUC) for approval of this need in Summer 2015. The AESO's needs identification document (NID) application will be available on the AESO's website at www.aeso.ca/nid at the time of its application to the AUC.

Who is the AESO?

Alberta's transmission system, sometimes referred to as the Alberta Interconnected Electric System (AIES), is planned and operated by the AESO. The transmission system comprises the high-voltage lines, towers and equipment (generally 69 kV and above) that transmit electricity from generators to lower voltage systems that distribute electricity to cities, towns, rural areas and large industrial customers.

The AESO's role is to maintain safe, reliable and economic operation of the AIES. The AESO's planning responsibility includes determining the need for transmission system development and the manner in which that need is met. The AESO is also mandated to facilitate the interconnection of qualified market participants to the AIES. The AESO is regulated by the AUC and must apply to the AUC for approval of its NID.

How is EDTI involved?

EPCOR Distribution and Transmission Inc. (EDTI) is the transmission facilities owner in the Edmonton area. While the AESO is responsible for identifying that transmission system development is needed, EDTI is responsible for detailed siting and routing, constructing, operating and maintaining the associated transmission facilities. The AESO has directed EDTI to provide information to stakeholders on this need and to file a facility proposal application with the AUC which will include a detailed description and location of the proposed transmission development.

Further Information

The AESO appreciates your views on the need for transmission system development and your comments are encouraged. If you have any questions or comments regarding the need for the proposed transmission system development in the Edmonton area or the AESO's application regarding this need, please contact:
