

Terms and definitions to be removed for use in the Alberta Reliability Standards:

1. **"real time"** means present time as opposed to future time.
2. **"operational planning analysis"** means an analysis of the expected system conditions for the next day's operation. (That analysis may be performed either a day ahead or as much as 12 months ahead.) Expected system conditions include things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generator outages, equipment limitations, etc.)
