

Term and definition to be amended for use in the ISO rules:

“**aggregated generating facility**” means, unless otherwise designated by the **ISO**, an aggregation of two (2) or more **generating units**, including any associated **reactive power** resources, where:

- (i) each **generating unit** is rated **less than 9 MW or smaller**;
- (ii) all **generating units** are situated in the same proximate location and have a common **collector bus** or multiple **collector busses** that can be operated as a common **collector bus**; and
- (iii) the **aggregated generating facility** is connected to the **interconnected electric system** or the electrical system in the service area of the City of Medicine Hat.

*** Note, the amendment reflected in this blackline definition was made after consultation and posted with AESO replies to market participant comments.
