

Need for the Windy Hill Biomass Generation Plant Connection in the High Level Area

Transmission Development Information for Stakeholders

Mustus Energy Limited (Mustus) has applied to the Alberta Electric System Operator (AESO) for connection of its Windy Hill Biomass Generation Plant to be located in the High Level area. Mustus's connection request can be met by modifying the Blumenort 832S substation and adding a 144 kV transmission line between the Blumenort 832S and Mustus's Windy Hill 675S substation.

The AESO is processing Mustus's request, including providing information to landowners, occupants, residents and agencies in the High Level area that may be near the proposed transmission development. The AESO intends to apply to the Alberta Utilities Commission (AUC) for approval of this need in early 2014. The AESO's needs identification document (NID) application will be available on the AESO's website at www.aeso.ca/transmission/8969.html at the time of its application to the AUC.

Who is the AESO?

Alberta's transmission system, sometimes referred to as the Alberta Interconnected Electric System (AIES), is planned and operated by the AESO. The transmission system comprises the high-voltage lines, towers and equipment (generally 69 kV and above) that transmit electricity from generators to lower voltage systems that distribute electricity to cities, towns, rural areas and large industrial customers.

The AESO's role is to maintain safe, reliable and economic operation of the AIES. The AESO's planning responsibility includes determining the need for transmission system development and the manner in which that need is met. The AESO is also mandated to facilitate the interconnection of qualified market participants to the AIES. The AESO is regulated by the AUC and must apply to the AUC for approval of its NID.

How is ATCO Electric Ltd. involved?

ATCO Electric Ltd. (ATCO) is the transmission facilities owner (TFO) in the High Level area. While the AESO is responsible for identifying that transmission system development is needed, ATCO is responsible for detailed siting and routing, constructing, operating and maintaining the associated transmission facilities. The AESO has directed ATCO to provide information to stakeholders on this need and to file a facility proposal application with the AUC which will include a detailed description and location of the proposed transmission development.

Further Information

The AESO appreciates your views on the need for transmission system development and your comments are encouraged. If you have any questions or suggestions regarding the need for the proposed transmission system development in the High Level area or the AESO's application regarding this need, please contact:
