

Notification of Amended Needs Identification Document Filing Addressing the Need for the Sharp Hills Wind Farm Connection in the Sedalia Area

The Alberta Electric System Operator (AESO) advises you that it intends to file an amended Needs Identification Document (NID) for the Sharp Hills Wind Farm Connection with the Alberta Utilities Commission (AUC) on or after December 3, 2021.

EDP Renewables SH Project Limited Partnership (EDPR) has applied to the AESO for transmission system access to connect its approved Sharp Hills Wind Farm (Facility) in the Sedalia area. EDPR's request can be met by the following solution:

- Add one 240 kV transmission line to connect the approved Facility to the existing transmission line 9L46 in a T-tap configuration.
- Add or modify associated equipment as required for the above transmission developments.

The grey shaded area on the map indicates the approximate location of the proposed transmission developments, including the 240 kV transmission line. The specific transmission facilities may extend beyond the grey shaded area shown.

ATCO Electric Ltd. is the transmission facility owner (TFO) in the Sedalia area. In December 2020, the AESO and the TFO presented updated information about the need to stakeholders, including residents, occupants, and landowners. The AESO will file an amended NID application with the AUC requesting approval of the need for this transmission development. This amended NID application will replace the original NID application that was filed in October 2017. Once filed with the AUC, the amended NID will be posted on the AESO website at <https://www.aeso.ca/grid/projects/sharp-hills-energy-connection/>

In a separate amendment to its Facility Application, the TFO will provide more details about the specific facilities associated with the AESO's proposed transmission development, and will request AUC approval to construct and operate these facilities.
