

Introduction

The following report provides information on the long term adequacy of the Alberta electric energy market. The report contains metrics that include tables on generation projects under development and generation retirements, an annual reserve margin with a five year forecast period at the time of system peak, a two year daily supply cushion, and a two year probabilistic assessment of the Alberta Internal Load (AIL). The Long Term Adequacy (LTA) Metrics provide an assessment and information that can be used to facilitate further assessments of long term adequacy. This report is updated quarterly in February, May, August, and November. Inquiries on the report can be made at forecast@aeso.ca.

Summary of Changes since Previous Report

New Generation and Retirements Metric

Projects completed and removed from list:

- Fengate Heartland Petrochemical
- Greengate Travers Solar*
- RESC Rattlesnake Ridge MPC Wind
- FortisAlberta Buffalo Creek 526S DER Storage
- Milner Power Milner 1 & 2 Gas

* To be fully energized by Q3 2022.

Generation Projects moved to “Active Construction”:

- ATCO Michichi DER Solar
- FortisAlberta Brooks 121S DER Solar 1
- FortisAlberta Brooks 121S DER Solar 2
- ATCO Sarah Lake 743S DER Geothermal
- RESC Enterprise MPC Solar
- FortisAlberta Vulcan 255S DER Solar
- Dunmore Solar Inc. Dunmore Solar
- Fortis Enchant 447S DER Solar
- Fortis Enchant 447S DER Solar 2
- Fortis Enchant 447S DER Solar 3
- Fortis Enchant 447S DER Solar 4
- Nutrien Redwater Cogen
- ATCO Elmworth 731S DER Gas

Generation projects moved to “Regulatory Approval”:

- Pteragen Peace Butte MPC Wind
- ATCO Mercer Hill 728S DER Battery
- TCE Saddlebrook Solar Storage
- Joss Jenner WAGF - Phase 2
- Joss Jenner WAGF - Phase 2
- FortisAlberta Joffre 535S DER Solar

- FortisAlberta Joffre 535S DER Solar 2
- ATCO Youngstown 772S DER Solar
- Kirkcaldy MPC Solar
- Nutrien Redwater Cogen
- FortisAlberta Gleichen DG Solar
- ATCO Fieldgate 824S DER Gas

Generation projects that have been added to “Announced, Applied for AESO Interconnection, and/or Applied for Regulatory Approval”:

- ATCO Sturgeon 734S DER Battery
- NGCI Ermineskin Cree Nation MPC Solar
- Fortis Bullshead 523S DER Solar
- Fortis Hughenden 213S DER Battery
- Kiwetinohk Maskwa MPC Gas
- SPWC Willow Ridge Wind
- SPWC Willow Ridge Battery
- Enerfin Sylvan Lake MPC Solar
- Greengate Luna 2 MPC Solar Battery
- Greengate Luna 2 MPC Solar Battery
- Fortis Duchess 339S DER Solar
- Capital Power Aldersyde Solar
- COL Chinook 181S DER Solar
- Clem Geo Castle Meridian MPC Solar
- Fortis Rimbey 297S DER Gas
- CP Genesee MPC Battery

Generation projects that have been added to on hold status:

- ATCO Anderson 801S DER Solar

Generation projects that have been removed:

- NaturEner Buffalo Trail WAGF
- NaturEner Ross Creek WAGF
- Soventix Forestburg Area Solar
- ATCO Monitor 1 774S DER Solar
- ATCO Monitor 2 774S DER Solar
- FortisAlberta East Crossfield 64S DER Wasteheat
- ATCO Bridge Creek 798S DER Gas
- Kiwetinohk Primo MPC Gas
- Vega Solar Battery

Reserve Margin Metric

The reserve margin has been updated to reflect changes to the project list and the updated 2021 LTO system load forecast.

Supply Cushion Metric

The forecast supply cushion has been updated to reflect the new time period and updated using the 2021 LTO Alberta Internal Load forecast.

Two Year Probability of Supply Adequacy Shortfall Metric

New values for the metric have been calculated with Total Energy Not Served equaling 16 MWh. This value is below the 1,977 MWh threshold. The forecast PSAS has been updated to reflect the new time period and updated using the 2021 LTO Alberta Internal Load forecast.

New Generation Projects and Retirements Metric

The New Generation Projects and Retirements Metric is a summary of generation at various stages of development in Alberta and is shown in Tables 1 to 5 below. In Alberta’s deregulated electricity market competitive forces determine the location, magnitude, and timing of new generation additions. Information on prospective generation additions and retirements provides context for the future market in Alberta. The information is drawn from a variety of public sources and includes new generation, changes to existing generation and the retirement of generating units. Changes in project in-service dates (ISDs) and regulatory stages occur as projects move forward and/or market conditions change. Current information on connection project ISDs can be found in the [AESO Project List](#) and information on power plant applications can be found at the [Alberta Utilities Commission](#) website.

Federal Coal Compliance Schedule

In 2012, the federal government approved the *Reduction of Carbon Dioxide Emissions from Coal-fired Generation of Electricity Regulations*. The regulation requires that coal-fired generation units meet a greenhouse gas (GHG) emissions intensity target once it reaches end of life. The AESO has adopted the federal compliance dates as retirement dates to evaluate metrics included in this report. The decision to retire a coal unit could also be impacted by several potential drivers, including the economics of plant operations, contractual agreements, and provincial and federal legislation. Announcements from the government will continue to be assessed as they are released.

Sponsor(s)	Project Name	Fuel	Unit Capacity	In Service Date	Federal Compliance Date ¹
Heartland	Battle River 4	Dual Fuel	155	1975	Dec-2025

¹ Federal Compliance Dates are based upon the applicable provisions of the Reduction of Carbon Dioxide Emissions from Coal-fired Generation of Electricity Regulations, as set forth in the Canada Gazette Vol. 146, No.19.

Reserve Margin Metric

The Reserve Margin Metric, shown in Figure 1, presents a comparison of generation supply and demand in Alberta. It is a calculation of the firm generation capacity at the time of system peak that is in excess of the system annual peak demand, expressed as a percentage of the system peak. Information on the annual peak demand within the reserve margin can be found on the AESO's [Forecasting](#) web page. Firm generation is defined as installed and future generation capacity, adjusting for seasonal hydro capacity and behind-the-fence demand and generation, and excludes wind and solar capacity. Three forecast reserve margins are presented, each with different future supply additions. The supply additions correspond to the stage of the generation projects in the New Generation Projects and Retirements Metric. The metric is graphed with and without inertia capacity in one reserve margin since full import capability may not always be available at the time of system peak demand.

Supply Cushion Metric

The Supply Cushion Metric provides visibility of the Alberta Internal Load’s ability to meet peak demand daily. The supply cushion is the difference between the daily available firm supply minus daily peak demand. Only existing generation and generation under construction are used within the metric. The supply cushion refines the reserve margin calculation by using daily peak rather than annual and incorporates planned outages. Figure 2 presents the estimated daily supply cushion for the next two years. Figure 3 presents daily peak demand and firm supply by fuel type, as well as interties, wind and solar which are not included in the supply cushion calculation due to the intermittent or uncertain nature of the supply. When the supply cushion is negative in Figure 2, there is an increased level of reliance on interties and wind, as indicated in Figure 3.

Two Year Probability of Supply Adequacy Shortfall Metric

The Two Year Probability of Supply Adequacy Shortfall Metric is a probabilistic assessment of encountering a supply shortfall over the next two years. It builds on the Supply Cushion Metric by incorporating the probability of wind production, forced generation outages and generation derates into the calculation of hourly firm supply. The calculation estimates, on a probabilistic basis, how much load may go without supply over the next two year period. Based on extensive consultation with stakeholders, when this unserved energy exceeds 1,977 MWh (consistent with ISO rule 202.6, Section 5(1)), the AESO may take certain actions to bridge the temporary supply adequacy gap while maintaining investor confidence in the market. The total energy not served shown in Table 6 does not reach the threshold.
