

## Introduction

The following report provides information on the long-term adequacy of the Alberta electric energy market. The report contains metrics that include tables on generation projects under development and generation retirements, an annual reserve margin with a five-year forecast period at the time of system peak, a two-year daily supply cushion, and a two-year probabilistic assessment of the Alberta Internal Load (AIL). The Long-Term Adequacy (LTA) Metrics provide an assessment and information that can be used to facilitate further assessments of long-term adequacy. This report is updated quarterly in February, May, August, and November. Inquiries on the report can be made at [forecast@aeso.ca](mailto:forecast@aeso.ca).

## Summary of Changes since Previous Report

### New Generation and Retirements Metric

#### *Projects completed and removed from list:*

- Enfinite Hughenden 213S DER Battery (eReserve5)
- Elemental Energy Chappice Lake 649S DER Solar

#### *Generation Projects moved to “Active Construction”:*

- Fortis Gleichen DG Solar
- ATCO Michichi Creek 802S DER Solar
- ENMAX FMC DER Cogen
- Fortis Tilley 498S DER Solar
- Greengate Jurassic MPC Solar Battery

#### *Generation projects moved to “Regulatory Approval”:*

- ENGIE Buffalo Trail South MPC Wind
- ENGIE Buffalo Trail North Wind
- Greengate Luna MPC Solar Battery
- Greengate Luna 2 MPC Solar Battery
- Fortis Duchess 339S DER Solar Battery
- Concord Monarch 492S DER Battery
- Concord Coaldale 254S DER Battery
- NuVista Wembley Thermal Power Plant
- Renewable Energy Services Ltd. McLaughlin Wind Power Plant
- Aceses Power ULC Duchess Solar Project
- 2289994 Alberta Inc. SunAlta Solar PV1 Power Plant

#### *Generation projects that have been added to “Announced, Applied for Alberta Electric System Operator Interconnection, and/or Applied for Regulatory Approval”:*

- TransAlta Provost MPC Wind
- Tidewater Midstream Strachan 263S DER Gas
- PACE Canada LP Sundre 575S DER Solar
- Concord Monarch 492S DER Battery

- Concord Vulcan 255S DER Battery
- Concord Coaldale 254S DER Battery
- 369966 Alberta Inc. The Rock MPC Solar
- ABO Wind Stettler 769S DER Solar
- Acestes Power Westlock 438S DER Solar Battery
- Enbridge SET1 Gas
- Wild Rose 2 wind LP Wild Rose 2 Battery
- Heidelberg Materials Canada Edmonton CCUS Gas
- St Albert Solar STL St. Albert Solar
- Journey Energy Rimbey 297S DER Gas
- NU-E Corp. Riverbend 618S DER Solar
- SWITCH Power Cypress 275S DER Solar
- Northern Valley Wind Irish Creek 706S DER Wind
- PACE Canada Sheerness MPC Solar Battery
- PACE Canada Mannix MPC Solar Battery
- Paintearth MPC Solar Battery
- Signalta Resources Blackfalds 198S DER Gas
- Huso Huso Cogen
- Pembina Gas Kaybob South 3 Cogen
- RESC Oyen Wind Phase II
- Future Energy Park SS-37 DER Gas
- Journey Energy High River 65S DER Gas
- Sounding Creek Solar park Sounding Creek Solar Battery

***Generation projects that have been added to on hold status:***

- EDF North Slope Solar

***Generation projects that have been removed:***

- Enbridge Metiskow Pump Station Gas
- Greencells Indygen Border Solar Battery

***Other changes to generation projects:***

### **Reserve Margin Metric**

The reserve margin has been updated to reflect changes to the project list and the updated 2021 Long-Term Outlook system load forecast.

### **Supply Cushion Metric**

The forecast supply cushion has been updated to reflect the new time period and updated using the 2021 Long Term Outlook Alberta Internal Load forecast.

### **Two-Year Probability of Supply Adequacy Shortfall Metric**

New values for the metric have been calculated with Total Energy Not Served equaling 0.01 MWh. This value is below the 1,997 MWh threshold. The forecast Probability of Supply Adequacy Shortfall has been updated to reflect the new time period and updated using the 2021 Long Term Outlook Alberta Internal Load forecast.

## New Generation Projects and Retirements Metric

The New Generation Projects and Retirements Metric is a summary of generation at various stages of development in Alberta and is shown in Tables 1 to 5 below. In Alberta’s deregulated electricity market competitive forces determine the location, magnitude, and timing of new generation additions. Information on prospective generation additions and retirements provides context for the future market in Alberta. The information is drawn from a variety of public sources and includes new generation, changes to existing generation and the retirement of generating units. Changes in project in-service dates (ISDs) and regulatory stages occur as projects move forward and/or market conditions change. Current information on connection project “ISDs” can be found in the [Alberta Electric System Operator Project List](#) and information on power plant applications can be found at the [Alberta Utilities Commission](#) website.

## Reserve Margin Metric

The Reserve Margin Metric, shown in Figure 1, presents a comparison of generation supply and demand in Alberta. It is a calculation of the firm generation capacity at the time of system peak that is in excess of the system annual peak demand, expressed as a percentage of the system peak. Information on the annual peak demand within the reserve margin can be found on the Alberta Electric System Operators' [Forecasting](#) web page. Firm generation is defined as installed and future generation capacity, adjusting for seasonal hydro capacity and behind-the-fence demand and generation, and excludes wind and solar capacity. Three forecast reserve margins are presented, each with different future supply additions. The supply additions correspond to the stage of the generation projects in the New Generation Projects and Retirements Metric. The metric is graphed with and without inertia capacity in one reserve margin since full import capability may not always be available at the time of system peak demand.

## Supply Cushion Metric

The Supply Cushion Metric provides visibility of the Alberta Internal Load’s ability to meet peak demand daily. The supply cushion is the difference between the daily available firm supply minus daily peak demand. Only existing generation and generation under construction are used within the metric. The supply cushion refines the reserve margin calculation by using daily peak rather than annual and incorporates planned outages. Figure 2 presents the estimated daily supply cushion for the next two years. Figure 3 presents daily peak demand and firm supply by fuel type, as well as interties, wind and solar which are not included in the supply cushion calculation due to the intermittent or uncertain nature of the supply. When the supply cushion is negative in Figure 2, there is an increased level of reliance on interties and wind, as indicated in Figure 3.

## Two Year Probability of Supply Adequacy Shortfall Metric

The Two-Year Probability of Supply Adequacy Shortfall Metric is a probabilistic assessment of encountering a supply shortfall over the next two years. It builds on the Supply Cushion Metric by incorporating the probability of wind production, forced generation outages and generation derates into the calculation of hourly firm supply. The calculation estimates, on a probabilistic basis, how much load may go without supply over the next two-year period. Based on extensive consultation with stakeholders, when this unserved energy exceeds 1,997 MWh (consistent with ISO rule 202.6, Section 5(1)), the Alberta Electric System Operator may take certain actions to bridge the temporary supply adequacy gap while maintaining investor confidence in the market. The total energy not served shown in Table 6 does not reach the threshold.

**Table 6: Two Year Probability of Supply Adequacy Shortfall, May 1, 2023 to Apr 30, 2025**
