Re: **Contingency Reserve Directive Quantities and Number of Hours with Contingency Reserve Directives**

In response to a data request, the AESO is providing hourly aggregated contingency reserve directive quantities and the number of hours with contingency reserve directives. The information provided contains the MWh values for spinning, supplemental generation and supplemental load reserve directives, and the total number of hours directed for each of these reserve types. The hourly MWh value is determined by the directive quantity (in MW) multiplied by the length of the directive (in minutes) divided by 60 minutes.

Please [click here](#) to view the report, which contains data from January 1, 2013 through April 30, 2015. There are no plans to provide future updates to this information at this time.

If you have any questions or comments please contact market.analysis@aeso.ca.

Yours truly,
